

2014 Egypt **Pharmaceuticals**

A prominent name in the pharmaceutical manufacturing industry in North Africa.

For a plant in Egypt, we supplied a series of temperature control units serving reactors for the production of active pharmaceutical ingredients. The treated temperature range goes from -20 to +200°C, allowing both heating and cooling to be modulated, via static relays and modulating pneumatic mixing valves.

In addition, we supplied a series of plate condensers for reactor venting, made from semi-welded high-alloy plates and fkm gaskets.
