

### 2013-2021 Milan, Italy **Metallurgy**

Main contractor operating in the battery and accumulator recovery and disposal sector, this company requires cooling systems for its production process. With a lasting partnership, the customer turns to us for both the heat exchange part and the logistics of cooling water circulation with associated automation and temperature and flow controls.

A company that operates globally, it also needs maximum support at the level of international certifications.

The classic system supplied consists of:

- redundant dissipation system
- buffer storage tank
- circulation pumps
- control and instrumentation panel

All supplied mounted on a skid, ready for installation in the field.
