

### 2018 Milan, Italy **Research & Engineering**

A long-standing main contracting company in the petrochemical and chemical industries, we have developed a strong partnership for years in special customised cooling and temperature control systems for particular processes.

On one specific occasion of collaboration, a solution of water and a chemical component had to be cooled, for a plant covered by extreme confidentiality.

Our supply extended to:

- refrigeration unit with redundant compressors, air-cooled, for marine climates and atmospheres, capacity 350 KW with brine-free solution at 0°C ambient 40°C
- titanium plate heat exchanger
- chiller/exchanger interconnection piping
- manual interface valves
- remote monitoring system

A system designed with maximum reliability and proven performance.
