

2022 Varese, Italy **Textile**

The weaving plants operate at very high speeds allowing a high level of production. To ensure the optimal production of each garment or fabric created, these machines require cooling of the oil that feeds them. Plate heat exchangers are the best solution: compact and flexible, they meet the requirements allowing an optimal result.

The customer in this case is a company known worldwide for the production of special high-performance fabrics. Always focused on sustainability, it found the application of our plate heat exchangers the perfect compromise for its production line.
